# Strengthening Michigan’s Future, One Skilled Hand at a Time

In the heart of Genesee County, Acument Global Technologies proves that when a company invests in its people, the return reaches far beyond the walls of its plant. Partnering with GST Michigan Works!, Acument took full advantage of the Industry Infinity Grant, federal funding secured in partnership with the Workforce Intelligence Network (WIN), intended to help advanced manufacturers sharpen their edge through workforce training and innovation.

Through this partnership, Acument committed to more than training; it committed to transformation. Employees engaged in specialized instruction, including Core Tools: APQP, Control Plan, FMEA & PPAP, and ISO 14001:2015 Internal Auditor Training. These programs didn’t just teach processes; they built precision, accountability, and pride in craftsmanship. The result… A workforce ready for tomorrow, today.

Employees are stepping into new roles with confidence, and Acument is building its future on a foundation of homegrown skills and leadership. Promotions are earned from within, retention is stronger, and the company’s ability to compete in a rapidly evolving global market has only deepened. This is how you build strength, not by chasing talent, but by growing it.

Acument Global Technologies is leading by example. Their success sends a clear message across Michigan’s manufacturing landscape: when businesses invest in their people, communities grow stronger, and our state moves forward together.
