

Electricians

Trade Summary - During a career as an electrical construction worker, a person will likely be involved in many different types of jobs presenting many new and different challenges, working with his or her hands as well as with their mind. Much of the work involves installation, assembling, testing, repairing, layout, and design of electrical wiring, fixtures, and apparatus used for power, light, heating, air conditioning, and many types of control systems. Many jobs now incorporate computers.

Work is done both indoors and outdoors in all temperatures, weather, and environmental conditions. The trade, at times, requires considerable physical effort for lifting, carrying materials, ladders, and tools, and climbing ladders and scaffolds. Since most of the work is performed from ladders, scaffolds, or powered lifts, the Electrical Construction Worker must be comfortable working at a variety of heights. Most job functions require the use of hand and power tools.

 Return Completed application to union.

Once the application is completed, all required documents have been provided to the union and the applicant has met all qualifications they will be notified by mail to take an aptitude test. The scheduling of aptitude testing takes place when the Flint/Saginaw Electrical JATC receives a sufficient number of applications. This could take as little as 1 month or as long as 1 year to schedule. The test consists of basic Algebra and English comprehension and is a 3 hour test. Programs start once a year, therefore, depending on how many qualified applicants the FSJATC has received, you may remain on the list for approximately 3 months to 2 years before being notified.
