

ROOFERS & WATERPROOFERS

TRADE SUMMARY

Roofers specialize in putting roofs on buildings and other structures to make them waterproof and weatherproof. They apply composition shingles, tile, slate and composition roofs. They use modern equipment to handle their materials, thereby lessening the physical exertion that was formerly required. Roofers are also called to waterproof and damp-proof walls and other building surfaces.

WHAT TO ANTICIPATE

Roofing work can be physically demanding because it involves heavy lifting, as well as climbing, bending, and kneeling. Roofers work outdoors in very hot or very cold weather, but they do not work when there is precipitation or when it is very windy.
